

The amount of genetic and chromosome conditions that can be tested for in pregnancy is constantly evolving. Click below for more information on some of the more commonly screened for conditions in pregnancy:

- [Down syndrome \(trisomy 21\)](#)
- [Edwards syndrome \(trisomy 18\)](#)
- [Patau syndrome \(trisomy 13\)](#)
- [Open Neural Tube Defects/Spina Bifida](#)
- [Sex Chromosome Variations](#)
  - [Turner \(45,X\)](#)
  - [Klinefelter \(47,XXY\)](#)
  - [Trisomy X \(47,XXX\)](#)
  - [Jacobs syndrome \(47,XYY\)](#)
- [Microdeletion syndromes](#)
  - [22q11 Deletion Syndrome](#)
  - [11q Jacobsen](#)
  - [4p Wolf-Hirschhorn](#)
  - [5p Cri-du-chat](#)
  - [8q Langer-Giedion](#)
  - [1p36 Deletion Syndrome](#)

- [Prenatal Screening Tests](#)

The field of prenatal screening has rapidly evolved over the last few years, and will likely continue to change in the future. There are many different types of screening tests available during pregnancy. It is important to know that screening tests will only tell you about the chance of a...

- [Prenatal Diagnostic Tests](#)

Prenatal diagnostic tests are tests that are able, in most cases, to give you a definitive 'yes' or 'no' answer about whether a pregnancy is affected with a variety of

chromosome and genetic conditions. While these tests are able to provide a lot of definitive information, there is a risk...
